Draftsight enables users to make extensive edits to a textured, color and dimensioned view of the model by using various methods of creating and editing the layers. Draftsight offers quick and efficient access to multiple tools and allows users to work in a layer based environment. Draftsight does not require a 3D model for creating a view, however there are additional features when working with 3D models. Using the Utilities feature, users can access a number of special tools that work well in a number of different design environments. These include the Translate tool, the Recompose tool and the Flip tool. Value enables users to add and subtract items from a view. The purpose of this feature is to allow users to highlight parts of a drawing and add or subtract items to or from that drawing. There is a single feature which works in both the program and the command-line version. DesignCenter is a tool that makes it easy for a user to search and find information about various elements of the program.
