AutoCAD is also available for Microsoft Windows and macOS computers as part of the Autodesk subscription offering from Autodesk Cloud. Who can use AutoCAD? Autodesk offers a free version of AutoCAD, AutoCAD LT, and AutoCAD Architecture for users who are not commercial. AutoCAD LT is available as an alternative to AutoCAD Mechanical and AutoCAD Electrical. From an Adam Sandler movie starring Dwayne "The Rock" Johnson to a fly on a cat in a blender, we take a look at the weirdest weird news of the day. 1. Cat Loses Fight With Refrigerator That Ends In Blender A cat named Mr. Fuzzybutt was taking a break in his owner's home. He was thinking about what he would like to eat for lunch. So he decided to check the kitchen refrigerator to see if there were any treats inside. Unfortunately for Mr. Fuzzybutt, there was also a vacuum cleaner that was sitting on top of the refrigerator. The vacuum cleaner caught him in its suction and dragged him in. Mr. Fuzzybutt was trapped inside the vacuum cleaner. His owner tried desperately to pull Mr. Fuzzybutt out of the vacuum cleaner. But when she failed, she tried to smash the vacuum cleaner with a hammer. To her surprise, when she did so the contents of the vacuum started to pour out of the broken vacuum. When the vacuum was finished, Mr. Fuzzybutt was still inside it. The owner then realized that she was facing an impossible situation. The cat was trapped inside the blender. That's why she threw the cat inside the blender. There was still enough of the cat in the blender to pull Mr. Fuzzybutt out. Once the cat was removed, the owner put Mr. Fuzzybutt on top of the stove. He had the oven door opened and the cat was able to run away. 2. David Duke Has His Own Page on Reddit David Duke has been living under a rock since the early 1990s. In his lifetime, Duke has become the face of white nationalism and the Ku Klux Klan. He has also been the leader of the National Association for the Advancement of White People. It is against the law to give him a podium at any political event. Click on "My files". On the left click on "data" and "extensions". Click "extensions > extensions.cab". This will open an archive with all the files in it. You may need to extract this archive first. There is a file in the archive "extensions.cab_contents" with 4 lines. The first line "X:\extensions.cab" gives the folder name, that we use when the app is run. The second line "X:" gives the full path to the archive. The last two lines are "L:". Here is the MD5 key hash, but the size is in bytes, not bits. For instance, the first line in the file is:
"X:\extensions.cab" The file size is 32 bytes or 1024 bits. The first 4 bytes of the hash gives the first 32 bits of the MD5 checksum. The next 4 bytes gives the second 32 bits of the checksum. The next 4 bytes is the third 32 bits of the checksum. The first 16 bytes of the MD5 checksum gives the first 256 bits of the MD5 checksum. The next 16 bytes gives the second 256 bits of the checksum. The next 16 bytes gives the third 256 bits of the checksum. The first 32 bits of the MD5 checksum gives the first 32 bytes of the MD5 checksum. The next 32 bits gives the second 32 bytes of the MD5 checksum. The next 32 bits gives the third 32 bytes of the MD5 checksum. The first 64 bits of the MD5 checksum gives the first 64 bytes of the MD5 checksum. The next 64 bits gives the second 64 bytes of the MD5 checksum. The next 64 bits gives the third 64 bytes of the MD5 checksum. Q: Why is the \$REPLY variable always null when a method of the class is called? In a situation when you have a class named School and it has a method named requestAddStudent which is using the method returnAddStudent(Student student) to return the student in the variable \$REPLY.
