Chapter 14 Fractions : In this PDF File you will get only solutions Chapter 14 Fractions | M.Tech Maths and ICSE Grade 12 Maths Books1. Field of the Invention The present invention relates to a display device, and more particularly, it relates to a display device, which is capable of interchanging display items. 2. Description of the Background Art In general, a display device such as a liquid crystal display device is implemented by a time division system, as described in Japanese Patent Laying-Open No. 2006-149989 (Patent Document 1), for example. That is, in a liquid crystal display device according to the related art, a display picture (display image) is written in picture elements of a first display image (obtainable on a first display side) based on video data, using a first frame period, and a picture element of a second display image (obtainable on a second display side) different from the first display image is maintained in a pause state (stand-by state) using a second frame period longer than the first frame period. In such a display device of the related art, however, an error occurs in a write timing of video data in a picture element (a written timing of a display image), and therefore, a display image cannot be always presented without being influenced by the error in the written timing. Therefore, when a display item is to be changed from the first display image to the second display image, there are problems that a display position of the second display image can not be recognized, and a display state of the second display image is thereby largely affected.Q: How to select just the visible fields with Django Template I am new to Django. I am having trouble selecting just the visible fields in my template. The problem is that I want to have a list of fields, and then when a certain field is selected, the fields in that section are visible. When another field is selected, the fields of that section are invisible. What I have is: # GET /aggregator/ # Get a list of all the fields. {% for field in fields %} {{ field }} {% endfor %} # META VARIABLE {% show\_fields field\_ 82138339de
