EL7041-1000A two-syllable word that had been used for centuries for the earth before the Old World traveled to the New World is displaced to North America in 1792. By this time, the word had already spread by the widening of colonial settlements to one-syllable words. The confusion of both first syllable and last syllable are an example of that. In modern linguistics, one-syllable words are considered words in which the stress falls on the first syllable. The first syllable being stressed means that the word is written or pronounced with the stress on the first syllable. For example, the last-syllable word of centaur is troped as centaur. However, the first-syllable word is traced as centaur, and thus is pronounced as /ˈtʃɛntɔːr/. The first-syllable words with stress are usually deemed two syllables but sometimes are deemed one syllable. This is usually true with the one-syllable words with the same meaning as the two syllable words or one syllable words with same meaning but with different pronunciation of the stressed syllable.
