HyperMotion details The following is a quick summary of the main benefits of HyperMotion Technology. Further information can be found in the HyperMotion section of the FIFA 22 Press Kit.

**Simplified Soccer Action** The ball feels lighter, snappier, and reacts to momentum more naturally due to the fact that it takes motion capture data from natural players, not from professional play data. This results in a more natural feeling of control.

**Perfect Passing and Through Balls** Players are more fluid in their movement; passing is much more natural and precise. Aerial duels and juggling on the ball are simplified because they're driven by the natural movements of players on the pitch.

**Artificial intelligence (AI)** also powers the detailed, natural, and accurate passing, controlled moves, and through balls.

**Better Controlling Set Pieces** Ball possession and set pieces are driven by authentic player-data to deliver realistic passes, controlling moves, and through balls in all types of playing situations.

**Improved Artificial Intelligence** Players anticipate threats and cover more space than ever before. Players make effective passes and are more persistent when handling the ball.

**FIFA 22 Gold Edition features:**

- Play as a top European club: Over the course of five seasons, you can build your brand, dominate in the top European competition, and face the daunting challenge of the UEFA Champions League

Over 25,000 players have played FIFA on the PlayStation 4 by way of the official EA SPORTS FIFA rating system, where users can earn more than 200,000 total points and unlock unique virtual awards and player cards

Today, we're excited to reveal "HyperMotion Technology," which uses motion capture data collected from 22 actual players playing a complete match in

motion capture suits. This data is used to power gameplay on FIFA 22, where players are now controlled with more natural and authentic movements, and the ball has the feel of a natural player. This improved responsiveness has a massive impact on gameplay, and the results of a simulated game were surprising. Data-Driven Movement FIFA 22
