chmod install I've installed ActiveState Perl
from: I want to install a module that
requires chmod, but when I do a search for
it, it always comes up with the incorrect
version. I need to install chmod but have
no idea what I'm looking at. I've done this
before with other programs and it's always
been a breeze. I am trying to run the
command: perl Build.PL Is it a version issue
or something else? A: This is what I do to
build the latest version of Perl on Windows:
perl Build.PL cd extensions perl

Configure.pl --notest make make test make
install The use CPAN to install modules, as
this will take care of the chmod issue for
you. I hope it helps. --- title:
