Jair Bolsonaro's seemingly unstoppable ascent to the presidency of Brazil - more than any in a generation - makes clear that "democracy" is merely a fiction for those who believe they have a divine right to rule. More Than 23,000 Call for A General Strike After Dictator Bolsonaro Wins Brazil Election by Margaret Kimberley Bolsonaro and his followers are now working to use the still unreformed Brazilian armed forces to crush any resistance. Perhaps then the people of Brazil will learn a grim lesson in their century of military coups and illusions in democracy. For the vast majority of the population, Bolsonaro's victory makes no difference, as they have been under the boot of neo-feudal oligarchs for the past century. As a long-time Black freedom fighter and activist, I have seen too many struggles against fascism begin with a few "tolerable" villains and end up with a

vanguard who are the same as the previous regime. All that is needed are enough willing fools. The infamous “It Can’t Happen Here” of Sinclair Lewis was written in 1940, just before the United States entered World War II. Though he was not a fascist, the film reflects the contempt for democracy expressed by Senator Joseph McCarthy and other anti-Communists. It also captures the naïve belief in a better future after the war. As Lewis’s novel and the film were adapted to film, it became a vehicle for Nazi propagandists who already believed the United

to make it back home before the oven turns off? The drive to find the information we need is becoming more complicated, and data is becoming more complicated to find. To help our users find what they need, we strive to keep up with emerging technologies and the latest discoveries, and as such, we want to share some of the research being done in Applied Informatics. We are constantly learning from our users and making the information we present more efficient. In this month's column, we look at a group of researchers who are working on using technology to help us navigate through difficult research data. Internet access, one of the most fundamental aspects of our modern world, provides us with the ability to store enormous amounts of information with ease. Today, more than 80 percent of the world's population lives in countries where access to the Internet is common. We can access information on a myriad of topics using websites like Wikipedia, and through smartphone apps. However, for many of us, researchers, we must search the Web for data to help us interpret the wealth of information found on the Internet. When it comes to data, it seems as though search engines have it all! Google, like its competitors, offers a few different search options, including a web search, an image search, and a news search. Google's product, Google Scholar, started out as a simple search tool, but now presents more of an interesting perspective than a simple search. Google's powerful search engine, coupled with an important partnership with the prestigious academic journal,
