Computers.x86.web.media-content.browsers.videoplayback.h264.track-identifier.size.25607.en.html. So, I want a solution to this problem for YouTube, Vimeo and DailyMotion. so, I want to change the file length to more than 2560 KB. . This is the URL I am posting. I can provide more information if needed. thanks in advance. A: I think the problem with your example link is that the resolution is 2048x854 and not 1280x720. Therefore, for 1280x720 they use the max file size of 2560 KB. By using something like you can see how they've set this size for each resolution. You could contact them and ask if there is a way to increase the size of the videos. Anyways, you can use the transcoding api to resizecontinuousmediafiles such as the video and audiocd contents. # To learn about Buck see [Docs]( # To run your application with Buck: # - install Buck # - `npm start` - to start the packager # - `cd android` # - `keytool -genkey -v -keystore keystore -storepass android -keypass android -dname "CN=Android Key,O=Android,C=US" -sigalg SHA1withRSA -validity 1000` # - `./gradlew :app:copyDownloadableDepsToLibs` - make all Gradle compile dependencies available to Buck # - `buck install -r android/app` - compile, install and run application # load(":"build\_defs.bzl", "create\_aar\_targets", "create\_jar\_targets") lib\_deps = [] create\_aar\_targets(glob(["libs/\*.aar"])) create\_jar\_targets(glob(["libs/\*.jar"])) android\_library( name = "all-libs", exported\_deps = lib\_deps, ) android\_library( name
