You have access to Photoshop's favorite toolbox through the drop-down menus of the top menu bar or press +Ctrl+L (Mac) or +Shift+Ctrl+L (Mac) to open the toolbox and select one of the three available tools. You can see the Toolbox tool in Figure 2-1. I explain which tool you should use with the image you're working on in Chapter 3. If you hover the mouse over a tool's name, you see an info box that displays a tooltip explaining the tool's function. **Figure 2-1:** You access Photoshop's toolbox from its top menu bar. Changing preferences The Photoshop Preferences dialog box enables you to specify many settings. Your Mac can open the Preferences dialog box from the Edit tab on the top menu bar. However, most of the time you find the dialog box by accessing the preferences by pressing . Many of the settings in the Preferences dialog box are hidden by default. However, if you position the cursor over a setting while in the Preferences dialog box, you see a tooltip that explains the setting. The description of each setting and its default value are located on the right side of the dialog box, so if you click the setting and press you jump directly to the setting's description. When you're done, press to close the Preferences dialog box, or use the command [back] to the most recently used document. As a rule of thumb when you're choosing preferences, I suggest opening up all the settings you might want to use, clicking to display their default values, and then fiddling with the settings to see how they affect your work. The Settings category of the Preferences dialog box includes most of the major Photoshop settings that affect general tasks (such as color and contrast settings) as well as the toolbox and layers. The Colors category — which includes Windows Color (which I cover in more detail in Chapter 3) — and the Effects category include settings that affect your ability to create and use special effects in Photoshop. The Size category includes the pixels-per-inch (PPI) setting you use when you create raster images. The Units category shows you the setting you use for the units of measurement used in Photoshop, including points, pixels, and inches. In Figure 2-2, you can see that I set the units to pixels because I often work in pixels when creating

Q: Change image on MouseOver I want a simple image to change when the mouse is over the image. I would prefer a solution using CSS if possible. I have an image in a div. When the mouse is over the div, a different image is displayed below the div. I have tried using background and img. However neither seems to work as expected. Here is the JQuery version I have tried `$(.menu).hover(function(){ $(this).css('background-image','url(/images/menu.png)'); }); $(.menu).mouseout(function(){ $(this).css('background-image','url(/images/menu.png)'); });` Any suggestions as to where I'm going wrong? A: I'm not sure what your problem is. `$(.menu).hover(function(){ $(this).css('background-image','url(/images/menu.png)'); }, function(){ $(this).css('background-image','url(/images/menu.png)'); });` `$(.menu).mouseout(function(){ $(this).css('background-image','url(/images/menu.png)'); });` Evening Out Share This Page When it's not time to get your hair done or have your nails done, where do you go for a quick treat?
