In one conventional approach, an implantable device provides for telemetry of stored data to an external device. When telemetry of stored data is provided for, for example, a pacemaker or implantable cardioverter defibrillator, the data transmitted is typically limited to a one way flow of data, such as diagnostic information. In this type of data transmission, the data sent from the device to the external device is displayed on the display of the external device. More recently, systems have been developed for two way data transmission from an implantable device to an external device. In such systems, a controller of the external device receives instructions and data from the implantable device. One example of such a system is the Medtronic® Diary.TM. system. An example of a system providing a two way transmission from an implantable device is the Model 9616 CardioArm.TM. system sold by Rhythms, Inc. In such two way data transmission systems, typically the external device is provided with a display and an input device which allow for transmitting of instructions to the implanted device. The input device typically includes a button for selection of an instruction and a keypad for data entry. The external device may,

in this case, be provided with a telemetry receiver for receiving two way transmission of data between the external device and the implanted device. It is also known to provide a communication link for allowing bidirectional exchange of data. This is typically in the form of a radio link which allows the implanted device to communicate with a programming unit. It is also known to provide a magnetic resonance link for allowing a telemetry procedure to be established between an external device and a device implanted in a patient. A system for establishing magnetic resonance link is described in U.S. Pat. No. 6,285,958.

Q: Akka Router Dead Letters I am trying to use a Dead Letter Queue using Akka Camel to send the request to a different url and log it. My Queue looks like this : This my akka router config: And my camel config: I am able to log all the correct information except for the Route like this: And in my log: As you can see, its printing what i want but not my Route value. Any idea why this is? A: c6a93da74d
