## Universal Gb Root V25.zip [REPACK]

I am downloading root basic checker and I have also downloaded gb v25 universal zip but I disabled tje mobipe and opened it but didn't get root s. I'm loading .sf. but how do I open it? I run "sudo gedit /frameworks/basic/mounts/descriptor.sf" on sudo but it doesn't find md5sum. I removed it but couldn't find md5sum. I don't know how to set up. I created a test.sf file but I can't open it either. I downloaded the .sf but how do I open it sudo gedit /frameworks/mounts/descriptor.sf sudo gedit /frameworks/mounts/descriptor.sf test.sf sudo gedit /frameworks/mounts/descriptor.sf test sf sudo gedit /frameworks/mounts/descriptor. sf test.s
